### **Bridge lifting works in Kuwait**

Bridge lifting works and replacement of bearings were successfully accomplished in Kuwait. ELEMKA's team executed these works at Bridge No. 500-050-2NB, Interchange 39, Fifth Ring Road, using 12 jacks of lifting capacity 200 tons each, while simultaneously repair works were executed at the adjacent expansion joints and concrete barriers. The works were accomplished within a deadline of 48 hours due to the need to reopen the bridge to traffic.
