Beginning of civil works for the Add On Project in Jordan

Following the completion of the Fast Track project, which was totally successful in terms of the quality of the completed works as well as the demanding project timetable, ELEMKA has already begun the works for a second project in Jordan, the Add On Project. The project consists of the design, construction and commissioning of a 143MW power plant, which will be an extension of the existing plant, thus adding a combined cycle unit to the already operating open cycle one.

Based on past experience, know-how and focus towards high goals, ELEMKA executes the coordination and construction of all civil works. The project works have already begun with the concreting of two major project structures, the Heat Recovery Steam Generator & the Exhaust Stack, as well as the excavation of the Steam Turbine foundation and the Air Cooled Condenser foundation.
